Yehan Zhang

Undergraduate, South China University of Technology, Guangzhou, China
yehanzhang@mail.scut.edu.cn — +86 198 6616 4195 — https://github.com/yhzhang1309 — OpenReview

RESEARCH INTERESTS

Multimodal Large Language Model, Lifelong Learning, ...

EDUCATION

South China University of Technology, Guangzhou, China — Sept 2023 — Jul 2027
Bachelor of Science: Data Science and Big Data Technology
GPA: 3.67/4.00
Coursework: Machine Learning (4.00/4.00), Deep Learning for Computer Vision (4.00/4.00), Discrete Mathematics (4.00/4.00), 3D Vision Intelligence (4.00/4.00).

PUBLICATIONS

1. **Yehan Zhang**, Huaidong Zhang, Xuandi Luo, Shengfeng He. — Sole First Author
   Healthcare Insurance Fraud Detection via Continual Fiedler Vector Graph Model.
   The Fourteenth International Conference on Learning Representations (ICLR 2026).
   Accepted as Poster. [*ICLR'26 Poster*].

2. Xuandi Luo, Huaidong Zhang, **Yehan Zhang**, Shengfeng He. — Third Author
   DynLearn: Steering Task-Specific Learning Dynamics in Exemplar-Free Class-Incremental Learning.
   Neural Networks (NN).
   Under Review.

3. **Yehan Zhang**, Fei Ma. — Sole First Author
   IntentRAG: Intent-guided Multimodal Long Document Understanding.
   The ACM International Conference on Multimedia (ACM MM 2026).
   Under Review.

PROJECTS

Lifelong Learning in Computer Vision — Guangzhou, China
Undergraduate Research, South China University of Technology — Mar 2025 — May 2025

- Present a task-adaptive framework that steers learning dynamics across tasks.
- Propose Complexity-Evolved Distillation, which adaptively scales distillation strength based on task complexity.
- Introduce Relational Temperature Scheduling, a dynamic supervision strategy that preserves early feature structures while reducing overlap between old and new classes.

Lifelong Learning in Fraud Detection — Guangzhou, China
Undergraduate Research, South China University of Technology — May 2025 — Sept 2025

- Propose a model for fraud detection under label scarce and non-stationary conditions.
- Develop a FiedlerVector-guided graph autoencoder that leverages global topological signals.
- Introduce a Subgraph Attention Fusion module for unsupervised online learning, enabling dynamic risk representation and continual adaptation to evolving fraud patterns.

Long Context Understanding in Multimodal Large Language Model — Shenzhen, China
Lab Intern, GuangMing Laboratory — Nov 2025 — Feb 2026

- Propose an innovative concept of "answer intention" and integrate it into retrieval and generation of the RAG pipeline.
- Leverage reinforcement learning to empower small-scale models to effectively extract answer intention from document chunks.
- Our model demonstrates superior performance on document understanding benchmarks, particularly excelling in long-document tasks.

SKILLS

- **Programming:** Pytorch, ms-swift, trl, **debugging**.
- **Language:** English (Fluent), Chinese (Native).
